Oct. 69

SECURITY - Time-Sharing System Terminals

In approving installation of data terminal circuits in 1-D-0421
and 1=D-1601 for the exclusive use and under the direct
supervision of the OCS ADP Training Staff, the Office of
Security said it should be remembered that although the use
of these terminals is supposed to be limited to unclassified
operations, in order to protect the integrity of the system
as a whole the same security procedures should be followed
in these cases as those in effect for the entire time-sharing
system.
